

The Protector

Unified Threat Management

SECPPOINT
www.secpoint.com

- ✓ Highly Sophisticated Intrusion Prevention System
- ✓ Zero Day Protection
- ✓ 10,000+ Database Signatures
- ✓ Built in Protection from Denial of Service Attacks
- ✓ Built in Protection from Unknown Attacks
- ✓ Protection for Newly Discovered Vulnerabilities where no Patches are Available
- ✓ Protect unpatched servers and workstations
- ✓ Protection for web sites and web shops

Intrusion Prevention System with Zero Day Protection

The cost of security breaches, downtime and data loss is unacceptable in this day and age. You need to be sure that your network is fully protected against any form of undesirable Internet traffic it might encounter.

Highly Sophisticated Intrusion Prevention System

The Protector comes fully loaded with a sophisticated intrusion prevention system and zero day protection.

The benefit of Intrusion Prevention is that it can block hacker, worm, virus and Denial of Service attacks that target valuable servers.

Zero Day Protection for Newly Discovered unpatched Vulnerabilities

For maximum defence Zero Day protection adds an extra shield to your network so it can protect against many new or unknown threats before the vulnerability is discovered. This provides true protection from exploits before they can be created and launched against your network.

This is of great benefit due to the fact that hackers often use zero day exploits to compromise a target system.

10,000+ Database Signatures

The Intrusion Prevention vulnerability database consists of more than 10 years of research. The Intrusion Prevention database is combined with sophisticated techniques such as zero day protection to ensure the best protection.

Built-in Protection from Denial of Service

Built-in Protection from Denial of Service Attacks

The Protector blocks Denial of Service attacks so that your systems are robust under heavy attacks.

Built-in Protection from Unknown Attacks

The Protector Intrusion Prevention System can block as yet unknown attacks. This is based on intelligence patterns from the database containing more than 10,000 unique attacks. It is of great benefit in offering protection from unknown specially-created attacks.

Protection for Newly Discovered Vulnerabilities where no Patches are Available

The Protector Intrusion Prevention System can protect from attacks based on newly discovered vulnerabilities and protect you from attacks for which no patch is available.

Protection for websites and web shops

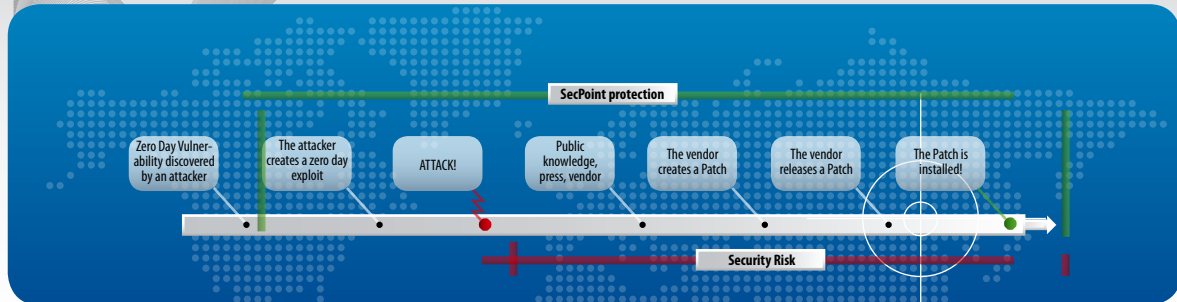

The Intrusion Prevention System protects from common web attacks such as SQL Injection, Cross Site Scripting, Directory Traversal and Information Disclosure attacks that are commonly used to compromise web shops.

The SecPoint® Protector

Intrusion Prevention with Zero Day Protection

SECPOINT®
www.secpoint.com

Databases updated several times daily!

Features

Highly Intrusion Prevention System

- ✓ Comes Fully Loaded with a Highly Sophisticated Intrusion Prevention System
- ✓ Zero Day protection
- ✓ Zero Day web exploit protection
- ✓ Blocks port scans and vulnerabilities scans

Zero Day Protection

- ✓ Protection for New Vulnerabilities
- ✓ True protection for exploits before they can be launched

10.000+ Database Signatures

- ✓ More than 10 years research for creating the database
- ✓ Divided in categories such as: Web, FTP, Mail, Database, SQL, Backdoors, Netbios, POP2, POP3, IMAP, RPC, SNMP, Telnet, SSH, X11 and more

Build in Protection from Denial of Service Attacks

- ✓ Blocks Denial of Service attacks
- ✓ Blocks Distributed Denial of Service attacks
- ✓ Blocks traffic from hacked workstations that are used in Denial of Service attacks

Build in Protection from Unknown Attacks

- ✓ Blocks unknown attacks that an attacker is constructing
- ✓ Blocks modifies known attacks that are constructed to avoid intrusion prevention systems

Protection for Newly Discovered Vulnerabilities where no Patches are Available

- ✓ Blocks newly discovered vulnerabilities even though patches are not released
- ✓ Blocks vulnerabilities for servers and workstations that do not yet have applied existing patches

Protection for Web Sites and Web Shops

- ✓ Blocks SQL Injection attacks
- ✓ Blocks Cross Site Scripting attacks
- ✓ Blocks Directory Traversal attacks
- ✓ Blocks Information Disclosure attacks
- ✓ Blocks Remote File Inclusion Attacks

Automatic Update

- ✓ Automatic daily database updates
- ✓ Automatic firmware updates with new features and functionality
- ✓ Centralized update point
- ✓ Automatic alert when database is expired
- ✓ Option to upload updates manually via the interface

Scalable and Upgradeable

- ✓ All units can be upgraded for network growth via a software license
- ✓ Investment protection

Support and Maintenance

- ✓ One year database subscription included
- ✓ 30 Days Silver support included
- ✓ Option for Silver, Gold, Platinum support
- ✓ Option for instant replacement hardware
- ✓ Quick setup wizard
- ✓ Configuration backup/restore
- ✓ Email alert and logging via syslog
